- Asteroid mining is the exploitation of raw materials from asteroids and other minor planets, including near-Earth objects.. Minerals can be mined from an asteroid or spent comet then used in space for construction materials or taken back to Earth. These include gold, iridium, silver, osmium, palladium, platinum, rhenium, rhodium, ruthenium and tungsten for transport back to Earth; iron, cobalt ... Sun, 20 May 2018 14:08:00 GMT  
Asteroid mining - Wikipedia - Metallurgy is a domain of materials science and engineering that studies the physical and chemical behavior of metallic elements, their inter-metallic compounds, and their mixtures, which are called alloys. Metallurgy is used to separate metals from their ore. Metallurgy is also the technology of metals: the way in which science is applied to the production of metals, and the engineering of ...
